Presentation 1

My experience working on this assignment was very good. But I think it would have been awesome if I had the chance to host this website on public internet using Droplet. I'm aware that a lot of students were having issues with droplet. I tired hosting my website online but I was getting access denied by the droplet, I'm not sure why. But rather than that it was good. I learned how to use open-source frameworks for webslides.js. Also learned how to use certain properties to make your presentation look very smooth and decent to the users. I 'would love to work more on these type of assignments to sharp my knowledge more in web development and internet programming.
